iPhone Scanning App

Looking for a good scanning app for creating PDF's on my iPhone. Any recommendations?

I use FasterScan (by ifunplay) on my iPad and I love it. Haven't paid for copies in years. When changes are made to agreements that have been brought to court, I scan the docs... the app lets you fix margins, control lightness/darkness, preview scan. I then email a copy to client.. and OC if they request (they nearly always do).

Laurie Axinn Gienapp, Massachusetts

I use Tiny Scanner on my Android phone, and I think it's terrific. I assume there is an iPhone version.

Andrew C. McDannold, Florida

I use Scanner for Me. Works fine. No issues. I can share the result by email, etc. too. I'd suggest trying some out and seeing what interface/usability works best for you.

Some apps, like Dropbox, may have a built in "scanner" too.

Phil A. Taylor, Massachusetts

Adobe Scan. Free and works great.

Laura S. Mann, New Jersey

---

oh wow... until now, I never knew DropBox had a built-in scanner. Color me excited! While I use DropBox a lot, on my iPad I'm generally accessing what's in there, rather than adding to what's in there.

I'm definitely going to have to try this out.

Thank you, Phil!

The DropBox scanner works great. It will even automatically recognize business cards and scan them as such.

Eugene Lee, California

Thanks. I'm going to try these out. I wasn't aware of the DropBox scanner either!

Peter Bauer, New York

Do you scan on your printer, and DropBox has the software? I don't get it.
RetaRETA A. McKANNAN,

---

no printer involved.

You open dropbox on your mobile device. Somewhere (for my ipad, it's bottom left), there's a + sign that says Create. if you click on that, one of the options is Scan Document. You then use the camera feature and take a picture. and it is saved to your dropbox as a PDF.

---

hi, just open up dropbox, hit the big PLUS button to add something new - select picture - then it will automatically take a picture of whatever your camera is pointing at. If it's a business card, it will automatically sense that.
